

The most trusted name in waterproofing since 1955.

STUCCO Commercial

Facade Waterproofing & Restoration

Stucco will eventually spall and crack as a result of the harsh New York climate. Water leaking through these cracks can lead to mold, interior wall deterioration and even structural damage. **BOCCIA OFFERS UNIQUE SOLUTIONS FOR CRACK REPAIR AND RESTORATION** of all types of stucco systems. Whether for a commercial building or a residential home, traditional cement stucco or EIFS (Exterior Insulation and Finish System), Boccia has the experience, knowledge, and craftsmanship to ensure your stucco repair project is completed to the highest standards.

AFTER

BEFORE

■ Boccia pressure washes the stucco to remove bond-breaking pollutants and repairs needed joints, holes & cracks with strong mortar and patching compounds.

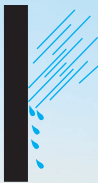

■ We then apply a waterproof **2-coat, high-build textured, acrylic color-coating system** that bridges those cracks and repels water, enhancing the building's appearance.

Our coating system allows the opportunity to change the look of the building with a wide range of colors to choose from.

Water will bead off the newly applied double-coated stucco surface. This is especially affective during heavy wind-driven rains.

The coating is 16 mils in thickness. Roughly **10X** thicker than paint.

PAINT

ACRYLIC COAT

Boccia's specialized techniques repair any size cracks and joints for a seamless look, that enhances the building's aesthetic and protects the structure.
