The most trusted name in  
waterproofing since 1955.

**BOCCIN** INC

since 1955

Waterproofing and Masonry Specialists

Licensed & Insured

# Water in your basement?

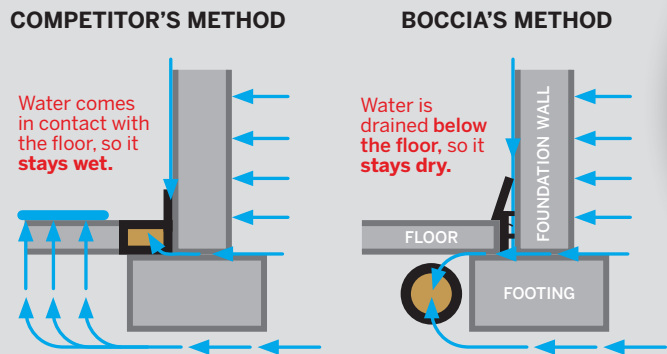

There are many possible causes:

- **Hydrostatic Pressure**  
Against foundation walls and floor
- **Structural Problems**  
Foundation cracks and leaning walls
- **Design Issues**  
Low-to-ground wood sill plates and flooded windows wells

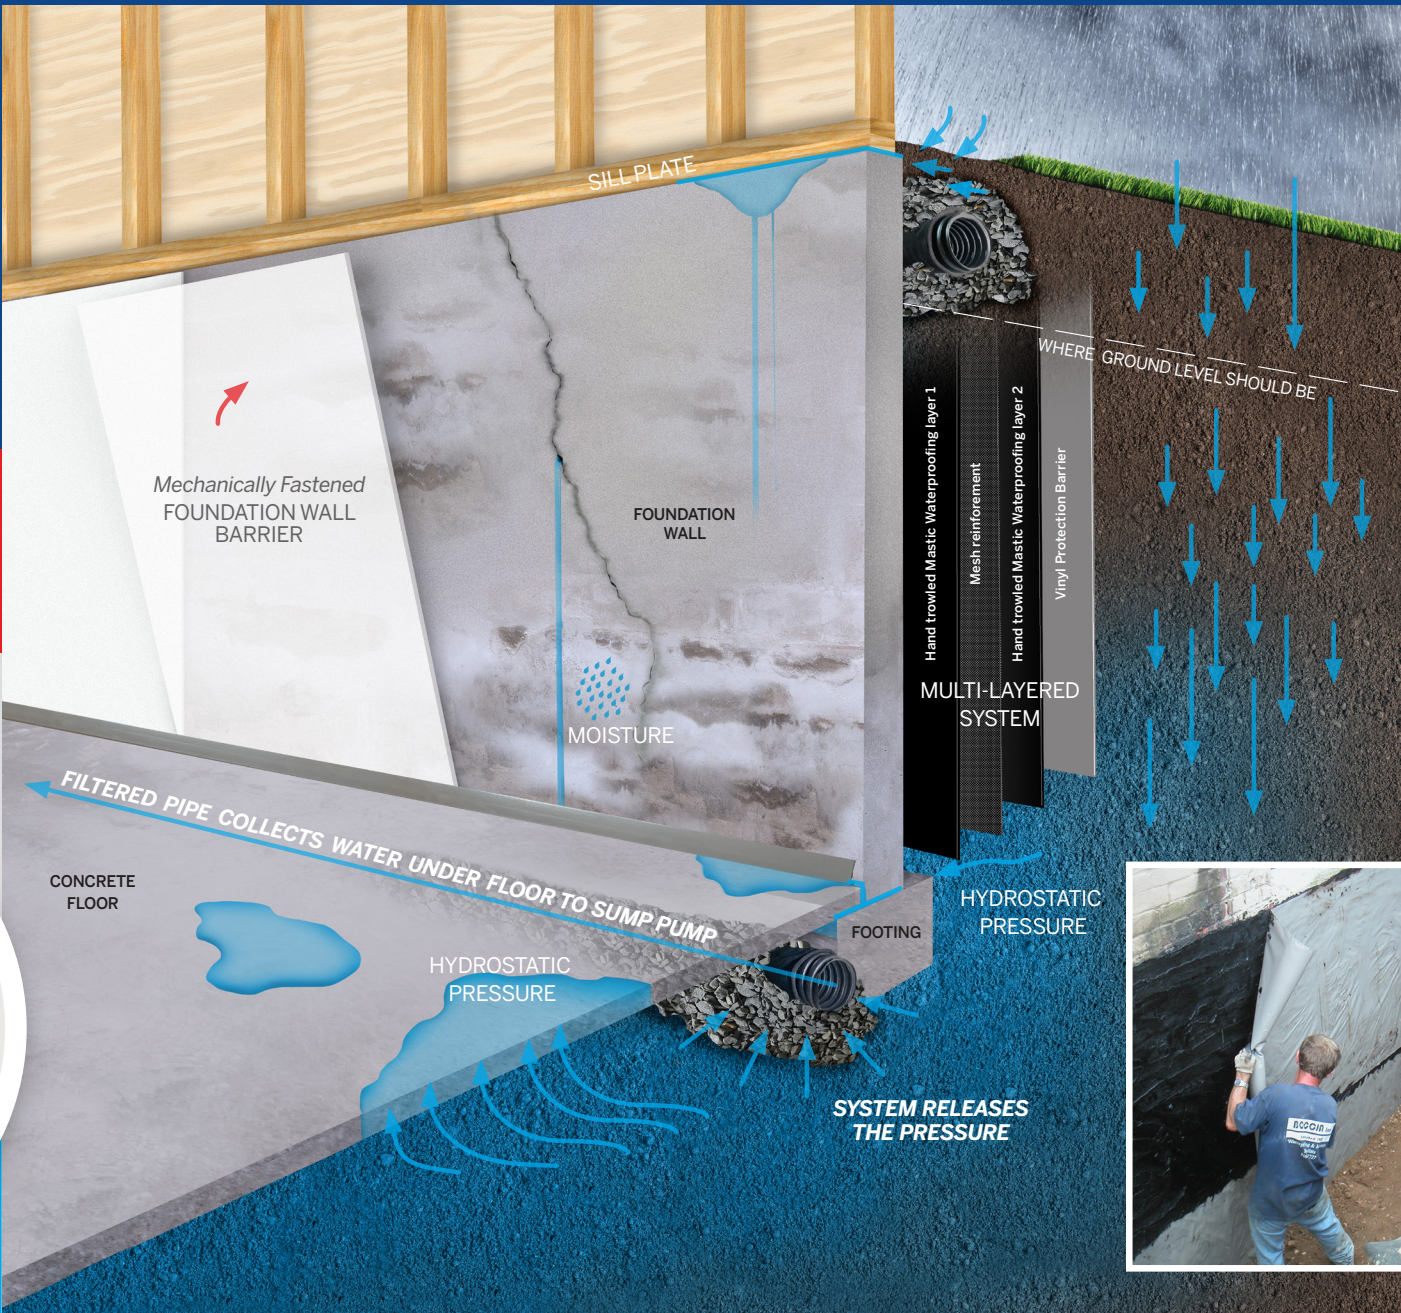

**BOCCIA INC** has the right solution for you!

## U.S. Patented Boccia Hollow Kick Molding Subfloor Drainage System

- Exclusive to Boccia, this system which uses only the **finest methods** and **premium quality materials** is designed to relieve hydrostatic pressure and prevent water from getting into your basement by removing water **below the basement floor**.
- Competitors will install sub-standard systems **on** the footing, allowing water to saturate the floor.

Using a filtered polyethylene high-capacity pipe along with **Boccia's own revolutionary patented Hollow Kick Molding**, the water is removed out of the soil before reaching the floor.

## Boccia Foundation Wall Barrier System

- Rigid polyethylene sheathing **mechanically fastened** to foundation wall allows it to breathe and direct moisture to the drainage system, **keeping the floor & walls dry!**
- **Separates interior finished walls**, including studs and insulation from cold damp foundation walls.

- Provides a bright, finished look that lasts forever and **will never support mold**.

## Mud Sill Drainage System

- **Tough water-proof membrane** separates the wood sill from the wet exterior.
- **Quality filtrated perforated pipe** surrounded in drainage stone, **removes the water from the sill plate**, and reduces potential rotting and ter-mite infestations.

## Exterior Foundation Waterproofing

- **Boccia's exclusive multi-layered system** delivers the absolute best and **unmatched exterior foundation waterproofing**.
- Two thick trowel-applied layers of mastic waterproofing with mesh reinforcement in between for **extra strength and durability**. Followed by a **thick reinforced vinyl protection barrier**.

## Foundation Crack Injection

For additional protection with Subfloor Drainage Systems

- Expandable waterproofing material is **injected into the crack**, filling and **sealing it**.

Landmark Projects

## Analysis. Design. Solutions.

Unlike companies that use a one-size-fits-all approach, Boccia tailors their waterproofing systems to meet specific water intrusion conditions.

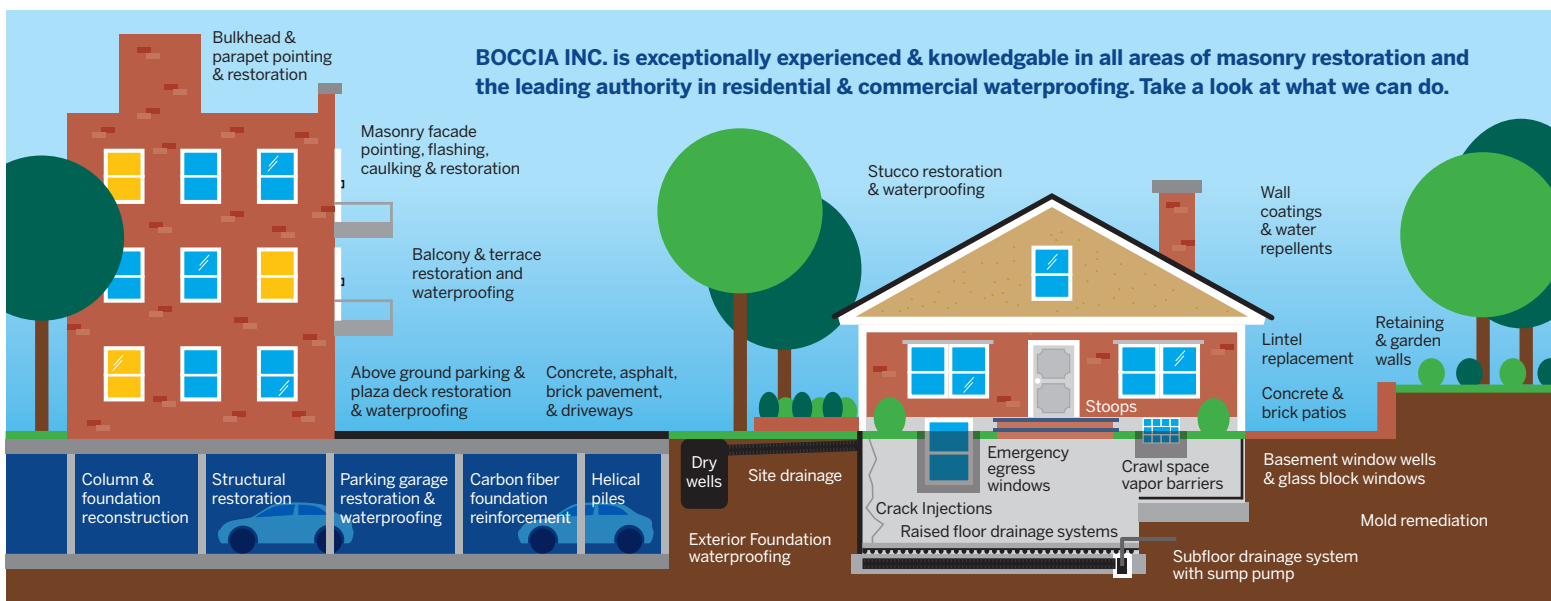

Affiliated Engineers

We Teach the Industry

Customer Satisfaction

**MAINTAINING A FLEET** of trucks with the equipment, tools, and most importantly, trained technicians, Boccia, Inc. insures all projects are provided with everything necessary to get the job done efficiently and effectively.

We have passed the hardest test of them all — the test of time! Proven again and again by the thousands of completed projects and overwhelmingly satisfied customers since 1955.

## Keeping Your Family Safe and Dry!
