

The most trusted name in waterproofing since 1955.

STUCCO Residential

Facade Waterproofing & Restoration

Stucco will eventually spall and crack as a result of the harsh New York climate. Water leaking through these cracks can lead to mold, interior wall deterioration and even structural damage. **BOCCIA OFFERS UNIQUE SOLUTIONS FOR CRACK REPAIR AND RESTORATION** of all types of stucco systems. Whether for a commercial building or a residential home, traditional cement stucco or EIFS (Exterior Insulation and Finish System), Boccia has the experience, knowledge, and craftsmanship to ensure your stucco repair project is completed to the highest standards.

■ After high pressure washing the stucco to remove any bond-breaking pollutants, Boccia will repair needed joints, holes and cracks with strong mortar and patching compounds.

BEFORE

AFTER

POWER WASH IMPURITIES.

REPAIR CRACKS.

APPLY WATER-REPELLENT COAT.

Water will bead off the newly applied double-coated stucco surface. This is especially affective during wind-driven rain.

■ **NOT JUST ONE-COAT.**

Boccia's preferred superior **2-coat** application of a high-build **textured, acrylic color-coating system** bridges cracks and will repel water, enhancing the overall appearance.

The coating is 16 mils in thickness. Roughly 10X thicker than paint.

PAINT

ACRYLIC COAT

A wide range of colors to choose from.
